Recommended applications
Construction / Industrial
The 203 dpi solution is suitable for printing simple labels with human-readable characters, without the need to print either 2D-code or graphics.
Semiconductor / Electronics
This high resolution 609 dpi solution is ideal for printing tiny label stickers for electronic peripherals such as PCBs, hard disk drives, and other small electronic components in both linear and 2D-code.

Dual LAN System
- MiniLAN allows printing and receiving error status through SMTP / POP3 / HTTP
- Option of using two ports. Checking printer status while sending data such as e-mail (SMTP) can be done simultaneously
- Capable of forwarding printer status to mobile phones (via SMTP)
- Staff can work from anywhere.

Warehousing / Logistics
305 dpi is the standard resolution used for logistics (such as printing shipping labels)
Capable of supporting small barcodes, 2D-code, as well as simple graphics

The "Standalone" Warehousing solution
SEMBL (SATO EMBEDDED BASIC LANGUAGE) enables developed software applications to reside within the GT printer.
- Plug-and-Play feature for connectivity of peripheral devices (i.e., scanners, scales, keyboards)
- Easy to operate configuration for quick installation
